Belt-O-Glass bias-belted

Performance rating 50,000 km

Sample: E78-14, Whitewall

78-series Belt-O-Glass, a favorite of Canadians for more than a decade, is great value anytime, even better during our Summer Spotlight Sale. Reinforced with DuPont 66 Nylon, chosen for its great strength (used in aircraft and racing car tires for high-impact resistance) and negligible flat-spotting. The 13, 14 and small 15" sizes are constructed of 2 giant Nylon plies and 2 glass belts — the large 15" sizes use 4 plies for a heavy-duty construction, best suited for vans, light trucks and heavy station wagons.

P155/80R-13
 Whitewall, ea.

Similar to radials installed on many new car models, our Glide-Air delivers super wet-and-dry traction, quick getaways, crisp stops. 2 lighter-weight glass belts encircling a polyester casing help keep wheel weight low for better fuel mileage and "glide-on-air" riding comfort. Deep-siped, computer-designed tread, channels water away from tread-face for more effective footing in wet road conditions.

Performance rating 52,000 km
